**Green adhesives today
for a sustainable world tomorrow**

Today's commitment for a better planet tomorrow.

Is it possible to combine industrial chemistry and nature? Our new product range, NATURA, perfectly combine these by adopting "clean" production standards.

Our greener materials reduce CO₂ emissions and our NATURA products will have much lower environmental impacts.

Our NATURA bio-based adhesives are developed from sustainable natural certified resources that are renewable and environmentally friendly. Inspired by the circular economy, together with our raw material suppliers, we continue to work tirelessly to innovate in this technology for a better future for our planet.

A valuable green opportunity especially for the furniture industry.

Our choices are guided by the will to pursue responsible growth in the present that can turn into a precious legacy for future generations. With NATURA we become ambassadors of a new approach to the development of sustainably responsible adhesives, including those for the wood industry, ensuring a sustainable alternative to those commonly used.

With this line of products, capable of combining high performance and a strong focus on the environment, we offer furniture manufacturers the opportunity to progress in a green direction also in the choice of adhesives, aligning with what is already happening in the many other sectors and products that touch our daily lives.

Sustainable innovation ready to turn into a competitive advantage.

Nowadays we can produce furniture using recycled materials such as panels, papers and plastics. From today, thanks to adhesives of our NATURA line, we can bond these materials together in a sustainable manner, giving manufacturers the opportunity to produce their products sustainably and further raising their quality standards and demonstrating to the consumer that one can live in harmony with nature without having to sacrifice performance, beauty and functionality.

Being able to offer the industry clear advantages is a priority which transforms into a new starting point to develop, in synergy with customers, an increasingly rich and specific range of solutions.

Bio-based products by definition and certification.

The NATURA line of adhesives are produced with a certified bio-based content, made with raw materials from renewable sources such as wood and residual biomass from agriculture. The use of these, unlike those of fossil origin, such as oil, natural gas and minerals do not disfigure or alter the environment but rather helps to maintain its balance.

The bio-based component of our products are certified through the chemical analysis of the Carbon 14 content according to ASTM 6866-16 and similar standards, or through the Mass Balance method, which certifies the origin and traceability of the raw materials, biological derivation used, performed by certification bodies such as ISCC and REDCert.

An ethical choice open to a growing number of products.

Our new brand NATURA is an ongoing project. The current product range is just the beginning of a large project that will soon incorporate a wider range of products. This demonstrates that our present focus is for a sustainable future.

Discover our
NATURA products

Within our current NATURA product range we can find EVA, PO and PUR hot melts with a bio-based content of up to 50% and with the possibility of expanding to other adhesive technologies and reaching much higher biological content values in the future.
